# MICHIGAN CLEAN AIR CONSULTANT DIRECTORY

## INTRODUCTION

Thank you for your interest in our *Michigan Clean Air Consultant Directory, Sixth Edition (Directory)*. The Environmental Science and Services Division (ESSD) of the Michigan Department of Environmental Quality (MDEQ) developed this *Directory* to provide a basic list of statewide air quality consultants, industrial hygienists, and analytical laboratories that perform varying levels of outdoor air pollution or indoor air quality control work and have one or more offices physically located in Michigan. This *Directory* is by no means an inclusive listing of all of the state's air quality consultants, industrial hygienists, and analytical laboratories. Rather, the entities listed in this *Directory* have consented to be a part of this publication. Each entry contains the consultant's own description, representing the expertise of their qualifications, specialties, staffing, and other experience.

**Please note: the state of Michigan, MDEQ, does not recommend or endorse the services or products of any particular company listed herein. The quality of service provided by each company is not known or implied by this listing. The MDEQ, by providing this *Directory*, does so as a courtesy to business, industry, and the general public; and it does not represent that the companies are, or are not, in compliance with or knowledgeable about all applicable federal, state, and local environmental laws. We encourage you to use the *Directory's* contents as a starting point in finding a solution to your environmental or health-related problem.**

The *Directory* is available on the Web. For the most current version of the *Directory*, please visit the MDEQ's Web site at:

**[www.michigan.gov/deqair](http://www.michigan.gov/deqair)**

At the MDEQ Web site select "Clean Air Assistance" from the drop down menu under the "Air" category. On the "Clean Air Assistance" page, select "Environmental Consultant Assistance" from the center menu under "Information."

The *Directory* is divided into six helpful sections:

**Section I:    Understanding the Differences Between Outdoor and Indoor Air Pollution**

Section I explains the differences between outdoor and indoor air pollution, explains which federal and state agencies regulate each type of air pollution, and lists applicable air quality consultants along with the services they provide.

## Section II: The Air Quality Service Locator

Section II provides a reference table that allows readers to quickly locate statewide air quality consultants, industrial hygienists, and analytical laboratories according to the specific type(s) of air pollution control or air quality services and activities they perform.

### Section III: Air Quality Consultants

#### Section IV: Industrial Hygienists

## Section V: Analytical Laboratories

Sections III through V contain lists of air quality consultants. Each entry includes the company's name, location, and contact information, along with a short introduction to or description of the company. The entry also includes a simple chart entitled, "Types of Air Quality Services Available" that shows which types of indoor or outdoor air quality services are available from the respective company based on the activity descriptions found in Section I. If applicable, each company entry also contains a list of branch office affiliations in the state for an alternate means of contact.

**Section VI: County Listing of Air Quality Consultants, Industrial Hygienists, and Analytical Laboratories**

For those looking for an air quality professional within their geographic proximity, Section VI lists the *Directory's* air quality professionals sorted alphabetically by Michigan county location.

## OTHER HELPFUL RESOURCES

Selecting a consultant to solve an outdoor or indoor air quality problem can be a very difficult and time consuming process. In an effort to help businesses and individuals select the most appropriate environmental professional to accomplish certain tasks, the ESSD of the MDEQ has developed an additional resource entitled, ***Working with An Environmental Consultant***. This guidance publication is a separate yet complementary fact sheet that can be used in conjunction with this *Directory*.

·  
·  
·

## MICHIGAN CLEAN AIR CONSULTANT DIRECTORY

Some of the highlights of this publication include:

- Help in determining when an environmental professional is needed.
- A description of the types of environmental consultants that are available and the types of work each may perform.
- Tips for the selection of, contract negotiation with, and management of these environmental professionals.
- A list of organizations that provide support services for the clients of contractual consultants.
- General guidance checklists and sample questionnaires that can be used to evaluate and compare the services of various types of multimedia environmental professionals.

Other helpful online resources for solving indoor air quality problems are offered by the American Industrial Hygiene Association (AIHA) and the U.S. Environmental Protection Agency (USEPA).

AIHA provides a list of consumer brochures that talk about some common indoor air quality problems, how to detect them, and what solutions are available to resolve them. The AIHA consumers' brochures are located at:

[www.aiha.org/Content/AccessInfo/consumer/consumerbros.htm](http://www.aiha.org/Content/AccessInfo/consumer/consumerbros.htm)

or by contacting AIHA directly at:

2700 Prosperity Ave., Suite 250  
Fairfax, VA 22031  
Telephone: (703) 849-8888

Studies of air pollution conducted by the USEPA estimate that indoor levels of pollutants may be 2-5 times, and in some cases more than 100 times, higher than outdoor levels. These levels of indoor air pollutants may be of particular concern because most people spend about 90 percent of their time indoors. To provide a better awareness of these pollutants, the USEPA's Web site offers a number of guidance publications, a list of frequently asked

11902B Farmington Road  
Livonia, Michigan 48150

Telephone: (734) 464-1716  
FAX: (734) 4648874

August Mack specializes in the assessment, engineering, and installation of systems that minimize waste and pollution; increase productivity and profitability; and, provide permanent, long-term solutions to environmental compliance issues. Our team of engineers has a thorough understanding of all sectors of the manufacturing process, from raw material usage to product finishing and distribution. This allows August Mack to provide a full range of process engineering services including: air permitting, industrial ventilation, and air pollution control design. In our ongoing effort to reduce the cost and increase the assurance of regulatory compliance for our clients, August Mack offers a unique program to guarantee environmental, health, and safety regulatory compliance. The program, eCAPSM (Compliance Assurance Program), is designed to allow the client to focus on the bottom line.

Our 30 years of staff experience can help your business understand the impacts of complex regulatory requirements, determine which regulations apply to your facility, and avoid unnecessary costs and delays by maintaining compliance with these requirements. We also can integrate your permit and regulatory requirements with your environmental management system. We have prepared installation and operating permit applications for a variety of industries for both major and minor emission sources. We have evaluated the technical and economic aspects of control technology, conducted dispersion modeling for pollutant concentrations and air toxics, and negotiated with regulators to achieve practical permit conditions for our clients. Our flexible approach to providing services allows us to supplement and complement your internal capabilities or handle the entire project. We welcome your inquiries.

ECT is a full-service environmental consulting firm serving clients across the country and abroad. Headquartered in Florida, we have seven offices in Michigan to serve the needs of companies throughout the Midwest. Our client list includes companies from both the private and public sector and covers all aspects of industry today, from small local metal finishers to large national utilities. We focus on building long-term relationships with our clients, giving ECT a working knowledge of the particular compliance issues that each business is facing. This gives ECT the expertise your business needs to maintain a competitive edge.

With nearly 200 experienced air professionals worldwide, Environmental Resources Management, Inc. (ERM) combines in-depth knowledge of state and local rules with national and international air quality expertise. ERM can assist you in planning your air quality processes and equipment to create an air quality management program that is technologically appropriate for the foreseeable future and compatible with your current requirements and budget. ERM can also assist you in bringing your operations into compliance with changing regulations in the quickest, most cost-effective way possible. ERM has extensive experience in all phases of air quality management, from conducting emissions inventories and developing monitoring programs, to preparing permit applications and designing pollution control systems. State-of-the-art monitoring equipment and the use of strategic modeling and risk assessment techniques enable ERM to evaluate problems accurately and engineer workable solutions.

Vision Environmental, Inc. (VEI) is an environmental engineering and consulting firm specializing in air quality management issues. Our expertise includes comprehensive permitting services such as acquisition of New Source Review (NSR) permits for major and minor sources, Title V Renewable Operating Permits, Maximum Achievable Control Technology (MACT) related permits/analyses, and permit system exemption analyses. VEI is also highly experienced with dispersion modeling impact analyses (federal NSR and state air toxics), Best Available Control Technology (BACT) and Lowest Achievable Emission Rate (LAER) evaluations, and refrigerant (i.e., ODS) and greenhouse gas management. VEI routinely assists industrial companies, utilities, and professional association clients with state and federal rulemaking advocacy, permit negotiations, compliance auditing and management programs, and other air quality services.

Since the early 1970s, Weston Solutions, Inc. (WESTON®) has been providing air quality management services to its industrial, commercial, and institutional clients, ranging from small firms to Fortune 500 companies. WESTON's expertise and experience enable us to accurately identify and address our clients' air quality issues, providing environmental solutions that meet business objectives. WESTON's air quality engineers and scientists utilize their knowledge and understanding of the regulatory climate, multiple engineering and scientific disciplines, and current developments in air pollution control technologies to help assess and meet the air quality management needs of our clients.
